

LEGACY KITS & COMPONENTS

LNCR Class J69/1, castings to scale

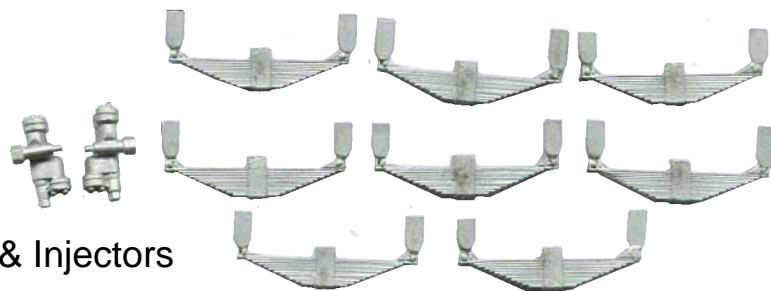

Even if you are not building a "Buckjumper" these castings may be a rich source of components for your project loco class.

So print out a copy of this pdf and check by measuring with a rule that the graduated scale measures 10cm (100mm). This will then confirm that your printer is reproducing to scale and you can compare the castings to the drawing of your intended project.
